WEB HOSTING
WWW.YOURNAME.COM

E-Mail billg@webtv.com

WebTV(tm) specializes in advanced state of the art Internet Hosting and programming, along with building custom web sites.

WWW Hosting Services

Your Web pages can be hosted on a server at our site. You don't need to worry about hardware, software, or anything else- we take care of everything! The servers are protected by an Uninterruptible Power Supply and are backed up to tape Nightly. This means you never need to worry about potential customers not being able to get your information.

Since your Web server is directly connected to our backbone, you won't experience the poor performance associated with limited bandwidth or network capacity. We offer full T-1 connections to the internet Via Netcom, ensuring High-speed server response, even at peak times. We receive about 2,000,000 hits per day without noticeable delays in speed.

Usage Feedback

We will provide Daily usage statistics reports for you, giving you valuable feedback on how many users are accessing your Webpages, and what they're looking at the most.

Custom Domain Name Registration

We will register a custom domain name and provide domain name service for that name. The name is chosen by the customer, but must be unique on the Internet. An example of a custom domain would be *mycompany.com*. Custom domain names provide a more professional corporate look to your e-mail

address. For example, you can get e-mail addressed to user@mycompany.com instead of user@ipp.com(the default for those without custom domain names). Additionally, each custom domain name registration includes Domain Name Service (DNS) Hosting , now required by Internic to complete Domain Name registration.

Verify that the Domain name you seek is available.
